

Safety Gloves

[INQ. NO. 2107C22] Gloveway® TERACUT® PIONEER features excellent cut resistance proven by EN388 2016/425 and ANSI standard reduces minor injuries in the workplace through durability and abrasion resistance. TERACUT PIONEER gloves are comfortable to wear due to the thin material, and they are 30% cooler than the traditional cut-resistant products. You can comfortably wear our gloves for longer periods of time.

This best primary technology does not use stainless steel or glass fiber to protect hands from injuries, and to enhance cut resistance performance compared to existing HPPE/Glassfiber yarn products. Our brand is constantly a leading brand to produce cost-effective and more cut-resistant products.

Gloveway® OIL-PRO offers high resistance to chemicals, petrochemicals and other harsh liquid risks. The 18gauge knitted fully double-dipped nitrile gloves with excellent dexterity provide comfort and flexible hand protection.

Master Sandy is equipped with a double Nitrile full-coating design and abrasion-resistant materials, these gloves offer a non-slippery grip, stronger abrasion, and

excellent resistance to oil and harsh liquid. They are ideal for handling chemicals, all kinds of oily and wet environment petrochemicals and oil refining.

SBW Co., Ltd. is a professional personal protective equipment (PPE) manufacturer that has provided functional protective gloves for various working environments through joint R&D with a world-famous PPE company for over 25 years.

The company continues to invest in R&D to lead the eco-friendly personal protective equipment market, and stands for a unique combination of material and process technology innovation, differentiated branding, efficient processing, and strict quality control.
